

# ICE MACHINE CLEANING/DELMING

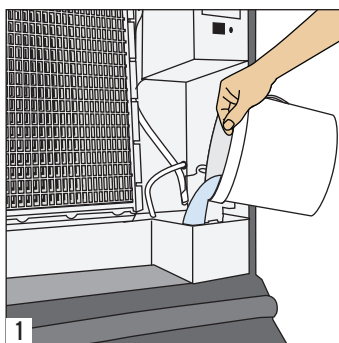

## Supplies needed:

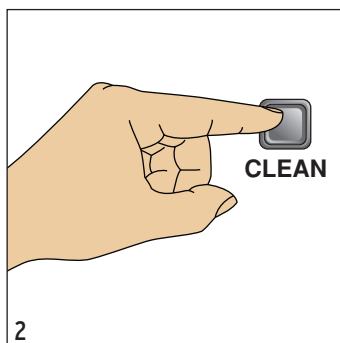

Clean bucket, clean, sanitizer-soaked towels, brushes

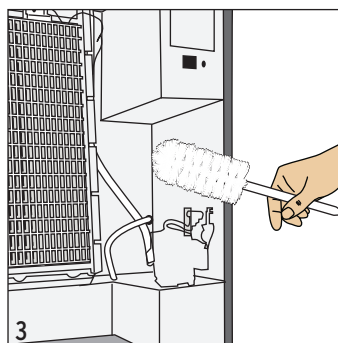

## Procedure (Monthly)

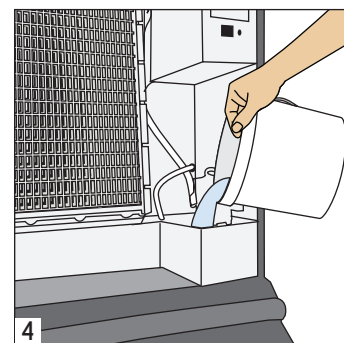

- Prepare fresh Delimer Solution by combining 4-5 packets of Delimer with 1 gal. /3.8 L water, depending on make/model of ice machine.
- Drain reservoir. Reinstall plug. Pour Delimer Solution into reservoir until full.

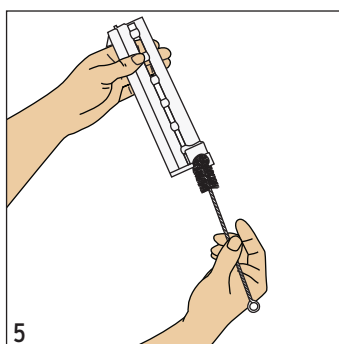

- Activate CLEAN cycle. Allow clean cycle and rinse to circulate through machine for approximately 25 minutes.

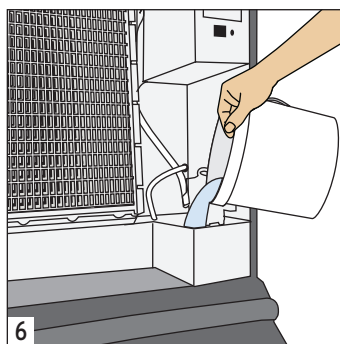

- Prepare Sanitizer Solution from dispenser.
- While Delimer Solution is circulating, scrub inside of cabinet and bins with Sanitizer Solution and large brush. Once CLEAN cycle is complete, turn machine OFF. Drain reservoir.

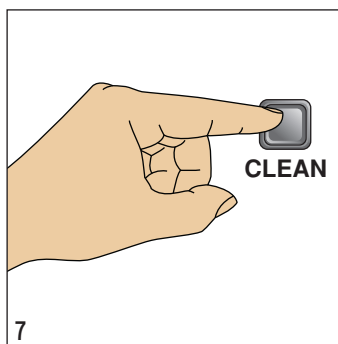

- Fill reservoir with clean, **warm** water. Activate CLEAN cycle. Allow rinse water to circulate 5 minutes. Turn machine OFF. Drain.

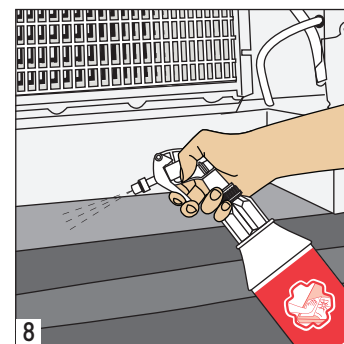

- Remove water distribution and manifold tubes at top of cabinet.
- Wash, rinse, and sanitize at 3-compartment sink.
- Replace in machine.

- Pour remaining Sanitizer Solution into reservoir until full.

- Activate CLEAN cycle. Allow Sanitizer Solution to circulate 5 minutes.

- While Sanitizer Solution is circulating, spray inside of cabinet and all ice bins with Sanitizer Solution. Allow to air dry. Turn machine OFF. Drain reservoir.  
**NOTE:** Turn machine to ICE or FREEZE. Discard first three batches of ice before serving.
